<tbody>
<tr>
<td>1. Transparency, not Black-Boxes</td>
<td>Transparency increases trust for the process</td>
<td>Sustainable investors understand the plan</td>
</tr>
<tr>
<td>2. Evidence-Based, not Stories</td>
<td>Evidence increases chance of success</td>
<td>Sustainable investors use data, not emotion</td>
</tr>
<tr>
<td>3. Systematic, not Ad-Hoc</td>
<td>Systematic eliminates human bias &amp; costs</td>
<td>Sustainable investors stay the course</td>
</tr>
<tr>
<td>4. Win-Win, not Win-Lose</td>
<td>Win-Win cultures sustain long-term partnerships</td>
<td>Sustainable investors trust their advisors</td>
</tr>
</tbody>
</table>

Education Helps Clients Become Better Investors
Education is critical for cultivating long-term, sustainable investors.

“Alpha” is Earned via Patience & Discipline
Why Does Sustainability Matter? **Good Behavior > High IQ**

We believe disciplined investors **earn returns** from less disciplined investors.

Source: Factset. 6/1/1999 to 2/29/2000. The results are hypothetical results and are **NOT** an indicator of future results and do **NOT** represent returns that any investor actually attained. Please see disclosures for additional information. Additional information regarding the construction of these results is available upon request.
## We Seek and Attract **E.D.U.C.A.T.E.D.** Clients

We are NOT for everyone: Are you the right client?
What we Do: Affordable Alpha
What We Seek to Deliver: Affordable Alpha

We believe active management works...if it's affordable

Why we believe our value proposition works

Affordable
- Our products are bought, not sold, which minimizes distribution costs
- We do more with less via low overhead and technology
- We focus on tax-efficient investment solutions

Alpha
- We have strong research capabilities and experience
- We are willing to be different: high active-share and concentration
- We invest in our own products and maintain a long-term perspective (i.e., strong incentive alignment)
We Seek Differentiation and Avoid “Closet-Indexing.”¹

Why Pay Fees for High Overlap with a Benchmark?

- **Fund A:** Actively Managed ETF with High Overlap (i.e., Low active share)
- **Fund B:** Actively Managed ETF with Low Overlap (i.e., High active share)
- **Benchmark**

NY Attorney General Comments on Closet-Indexing²

- “Investors who choose to buy actively managed funds...should seek to understand what additional value they may obtain in exchange for higher fees.”
- “Active Share helps investors discern the overlap between an actively managed fund and the fund’s corresponding benchmark index...”
- “Similarly, Active Share may help an investor assess whether a fund’s fees are acceptable.”
- “Investors should seek to understand the Active Share metric and request Active Share information from their brokers or mutual fund providers if it is not publicly available.”

We are Thought Leaders in Quant and Factor Investing

We Publish Peer-reviewed Research

Contribute To National Outlets

And Our Approach Is Making News
We do business under the brand of “Alpha Architect” or “ETF Architect”.

Empirical Finance, LLC is our top-level entity and owns 100% of Alpha Architect, LLC and Empowered Funds, LLC.

Alpha Architect, LLC is an advisor entity that generally manages our SMAs and intellectual property.

Empowered Funds, LLC is an advisor entity that generally manages our ETF operations and does business as ETF Architect.
There are risks involved with investing, including loss of principal. There is no assurance that the objectives of any strategy or fund will be achieved or will be successful. No investment strategy, including diversification, can protect against market risk or loss. Current and future portfolio holdings are subject to risk. Past performance does not guarantee future results.

There is a risk of substantial loss associated with trading commodities, futures, options and other financial instruments. Before trading, investors should carefully consider their financial position and risk tolerance to determine if the proposed trading style is appropriate. Investors should realize that when trading futures, commodities and/or granting/writing options one could lose the full balance of their account. It is also possible to lose more than the initial deposit when trading futures and/or granting/writing options. All funds committed to such a trading strategy should be purely risk capital.

Certain economic and market information contained herein has been obtained from published sources prepared by other parties, which in certain cases have not been updated through the date hereof. While such sources are believed to be reliable, neither Alpha Architect nor its affiliates assumes any responsibility for the accuracy or completeness of such information and such information has not been independently verified by Alpha Architect.

Index returns are for illustrative purposes only and do not represent actual fund performance. References to an index do not imply that the portfolio will achieve returns, volatility or other results similar to that index. The composition of the index may not reflect the manner in which a portfolio is constructed in relation to expected or achieved returns, portfolio guidelines, restrictions, sectors, correlations, concentrations, volatility or tracking error targets, all of which are subject to change. Index performance returns do not reflect any management fees, transaction costs, or expenses, which would reduce returns.

Indexes are unmanaged and one cannot invest directly in an index. There are no active components of indexes; therefore, using them as a proxy can be of limited value because there is no guarantee that the portfolio would have been managed to match the index. Realized returns and/or volatility may come in higher or lower than expected.

Annual performance is calculated based on monthly return streams, geometrically linked as of the end of the specified month end.

Results, unless cited otherwise, are shown gross of fees and do not reflect the effect of investment fees which would lower performance. Performance reflects the reinvestment of dividends and other earnings. The following hypothetical illustrates the compound effect fees have on investment return: For an account charged 1% with a stated annual return of 10%, the net total return before taxes would be reduced from 10% to 9%. A ten year investment of $100,000 at 10% would grow to $259,374, and at 9%, to $236,736 before taxes. For a complete description of all fees and expenses, please refer to Alpha Architect’s Form ADV Part 2A.
Performance figures contained herein are hypothetical, unaudited and prepared by Alpha Architect, LLC; hypothetical results are intended for illustrative purposes only.

Past performance is not indicative of future results, which may vary.

Hypothetical performance results (e.g., quantitative backtests) have many inherent limitations, some of which, but not all, are described herein. No representation is being made that any fund or account will or is likely to achieve profits or losses similar to those shown herein. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently realized by any particular trading program. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or adhere to a particular trading program in spite of trading losses are material points which can adversely affect actual trading results. The hypothetical performance results contained herein represent the application of the quantitative models as currently in effect on the date first written above and there can be no assurance that the models will remain the same in the future or that an application of the current models in the future will produce similar results because the relevant market and economic conditions that prevailed during the hypothetical performance period will not necessarily recur. There are numerous other factors related to the markets in general or to the implementation of any specific trading program which cannot be fully accounted for in the preparation of hypothetical performance results, all of which can adversely affect actual trading results. Hypothetical performance results are presented for illustrative purposes only.

Neither Alpha Architect nor its affiliates provide tax advice. IRS Circular 230 disclosure: To ensure compliance with requirements imposed by the IRS, we inform you that any tax advice contained in this communication was not intended or written to be used, and cannot be used, for the purpose of (i) avoiding tax-related penalties under the Internal Revenue Code or (ii) promoting, marketing or recommending to another party any matters addressed herein. You should seek advice based on your particular circumstances from an independent tax advisor.

The information contained in this communication is not meant to substitute for a thorough estate planning and is not meant to be legal and/or estate advice. It is intended to provide you with a preliminary outline of your goals. Please consult your legal counsel for additional information.

This presentation is only intended for pre-approved presentations and may not be duplicated in any form by any means or redistributed without Alpha Architect’s prior written consent.
Simulated Historical Performance: All returns are total returns and include the reinvestment of distributions (e.g., dividends).

Index Characteristics Data Source: Characteristics are from FactSet and derived via the ETFs that track the respective Indexes. Characteristics are holdings-weighted. The data for the performance and factor attribution analysis are from Alpha Architect and Solactive.

The S&P 500 Index (SP500) is a capitalization-weighted index that measures the performance of the broad U.S. equity market.
The MSCI EAFE Index (EAFE) is a capitalization-weighted index that measures the performance of developed market equities, excluding the U.S. and Canada.
The MSCI World Index is a capitalization-weighted index that measures the performance of developed market equities.
EBIT/TEV is defined as earnings before interest and taxes divided by total enterprise value.
Momentum (2-12) is defined as the cumulative total return for the past 12 months, excluding the last (12th) month.
Size is defined as the total market value of the company's listed equity.
Return on assets is defined as net income divided by total assets.

Compound annualized growth rate, or CAGR, is defined as the annualized growth of an initial investment to the ending investment value if you assume that the investment has been compounding over the time period.
Standard Deviation: Sample standard deviation
Downside Deviation: Sample standard deviation, but only monthly observations below 41.67bps (5%/12) are included in the calculation
Sharpe Ratio (annualized): Average monthly return minus treasury bills divided by standard deviation
Sortino Ratio (annualized): Average monthly return minus treasury bills divided by downside deviation
Appraisal Ratio (annualized): CAPM regression intercept estimate divided by regression residual volatility
Worst Drawdown: Worst peak to trough performance (measured based on monthly returns)
Rolling X-Year Win %: Percentage of rolling X periods that a strategy outperforms
Sum (5-Year Rolling MaxDD): Sum of all 5-Year rolling drawdowns
Down %: The Down Number Ratio is a measure of the number of periods that the investment was down when the benchmark was down, divided by the number of periods that the benchmark was down. The smaller the ratio, the better
Up %: The Up Number Ratio is a measure of the number of periods that the investment was up when the benchmark was up, divided by the number of periods that the benchmark was up. The larger the ratio, the better
Tracking Error: Tracking Error is measured by taking the square root of the average of the squared deviations between the investment’s returns and the benchmark’s returns
Negative Correlation: Correlation of returns relative to benchmark returns when the benchmark is negative
Positive Correlation: Correlation of returns relative to benchmark returns when the benchmark is positive

Performance figures contained herein are hypothetical, unaudited and prepared by Alpha Architect, LLC; hypothetical results are intended for illustrative purposes only. Past performance is not indicative of future results, which may vary. Index returns are for illustrative purposes only and do not represent actual fund performance. Index performance returns do not reflect any management fees, transaction costs, or expenses, which would reduce returns. Indexes are unmanaged and one cannot invest directly in an index.
